

133 Series Direct-Operated Regulators

W1327/IL

TYPES 133H, 133L, AND 133Z REGULATORS

W6803/IL

TYPE 133HP REGULATOR

Figure 1. 133 Series Direct-Operated Regulators

Features

- **Wide Pressure Range Capability with Single Regulator**—Type 133H may also use Type 133L springs, allowing pressure settings to be varied between 2 inches w.c. and 10 psig / 5 mbar and 0.69 bar by changing springs.
- **Types 133L, 133H, and 133HP Suitable for Monitoring Applications**—O-ring stem seal on Types 133L, 133H, and 133HP isolates body pressure from controlled pressure.
- **Excellent Shock Characteristics and Fast Speed of Response**—Due to two-way stabilizer vent valve, which vents the spring case more rapidly than conventional vents, lag in diaphragm and valve disk movement is minimized.
- **Bubble-Tight Shutoff**—Single-port construction, large diaphragm area, and light-rate springs along with disk material and seat design provide low lock-up pressures.

- **Spring and Diaphragm Effects Minimized**—Boosting system provides excellent performance over a wide range of flow conditions.
- **No Seat-to-Seat Adjustment Required**—Balanced single-port design eliminates necessity for seat-to-seat adjustments to achieve bubble-tight shutoff.
- **Easy Access to Trim Parts**—Valve seat, disk, and cage easily removed with body remaining in line and without disassembly of actuator portion; orifice is not threaded in.
- **Reusable Pressure Seals**—O-rings used for pressure seals, unlike gaskets, are not ordinarily damaged by disassembling the regulator.
- **Resistance to Piping Stresses**—Steel constructions are available to help resist pipe stresses.

Bulletin 71.1:133

Specifications

The Specifications section lists the specifications for the Type 133 Series direct-operated regulators. Factory specification is stamped on the nameplate fastened on the regulator at the factory.

Available Constructions

Type 133H: Direct-operated regulator for inlet pressures to 60 psig / 4.1 bar and outlet pressures from 1.5 to 10 psig / 0.10 to 0.69 bar, three ranges.

Type 133HP: Direct-operated regulator for inlet pressures to 150 psig / 10.3 bar and outlet pressures from 2 to 60 psig / 0.14 to 4.1 bar, seven ranges.

Type 133L: Direct-operated regulator for inlet pressures to 60 psig / 4.1 bar and outlet pressures from 2 inches w.c. to 2 psig / 5 mbar to 0.14 bar, six ranges.

Type 133Z Zero Governor: Direct-operated regulator for inlet pressures to 20 psig / 1.4 bar and outlet pressures from -1 to 4-inches w.c. / -2.5 to 10 mbar, two ranges.

Body Size and End Connection Styles

BODY SIZE		BODY MATERIAL	
Inch	DN	Cast Iron Body	WCC Steel Body
2	50	NPT or CL125 FF Flanged	NPT or CL150 RF Flanged

Maximum Inlet Pressures⁽¹⁾

Maximum Outlet Pressures⁽¹⁾

See Table 2

Pressure Registration

External; downstream control line is required

Control Line Connection

Types 133H, 133L, and 133Z: 3/4 NPT internal connection will be positioned directly over body outlet (standard position) or 90° right or left of standard position if specified.

Type 133HP: 1/4 NPT Internal connection positioned directly over body outlet.

Vent Connection

Types 133H, 133L, and 133Z: 1 NPT internal with screen; standard position is in line with control line connection directly over body outlet. Vent will always be positioned over the control line connection.

Type 133HP: 1/2 NPT internal connection positioned directly over body inlet with a Fisher® Type Y602-7 vent assembly.

Temperature Capabilities⁽¹⁾

-20 to 150°F / -29 to 66°C

Construction Materials

Body: Cast iron or WCC Steel

Orifice and Cage: Aluminum

Valve Disk: Aluminum/Neoprene (CR) or Aluminum/Fluorocarbon (FKM)⁽³⁾

O-rings: Nitrile (NBR) or Fluorocarbon (FKM)⁽³⁾

Diaphragms:

Nitrile (NBR)/Nylon (PA) (Neoprene (CR) in actuator) or Fluorocarbon (FKM)⁽³⁾/Polymer Thermoplastic

Guide Bushing: Nylon (PA)

Stem and Stem Sleeve: Stainless steel

Diaphragm Plate: Steel

Balancing Diaphragm Plate: Plated steel

Spring Case and Closing Cap:

Type 133HP: Cast Iron

Types 133H, 133L, and 133Z: Aluminum

Lower Casing:

Types 133H, 133L, and 133Z: Aluminum

Type 133HP: Steel

Adjusting Screw:

Types 133H and 133Z: Brass

Type 133L: Aluminum

Type 133HP: Steel

Optional Restriction Collar: Aluminum

Approximate Shipping Weight

Types 133H, 133L, and 133Z NPT

End Connections: 35 pounds / 16 kg

Types 133H, 133L, and 133Z Flanged

End Connections: 40 pounds / 18 kg

Type 133HP NPT End Connections:

56.5 pounds / 26 kg

Type 133HP Flanged End Connections:

62.5 pounds / 28 kg

Option

Restriction collar to reduce wide-open capacity to approximately 25%, 40%, or 60% of standard wide-open capacity.

1. The pressure/temperature limits in this Bulletin or any applicable standard limitation should not be exceeded.

2. Using optional restriction collar.

3. Available for Types 133L and 133H only.

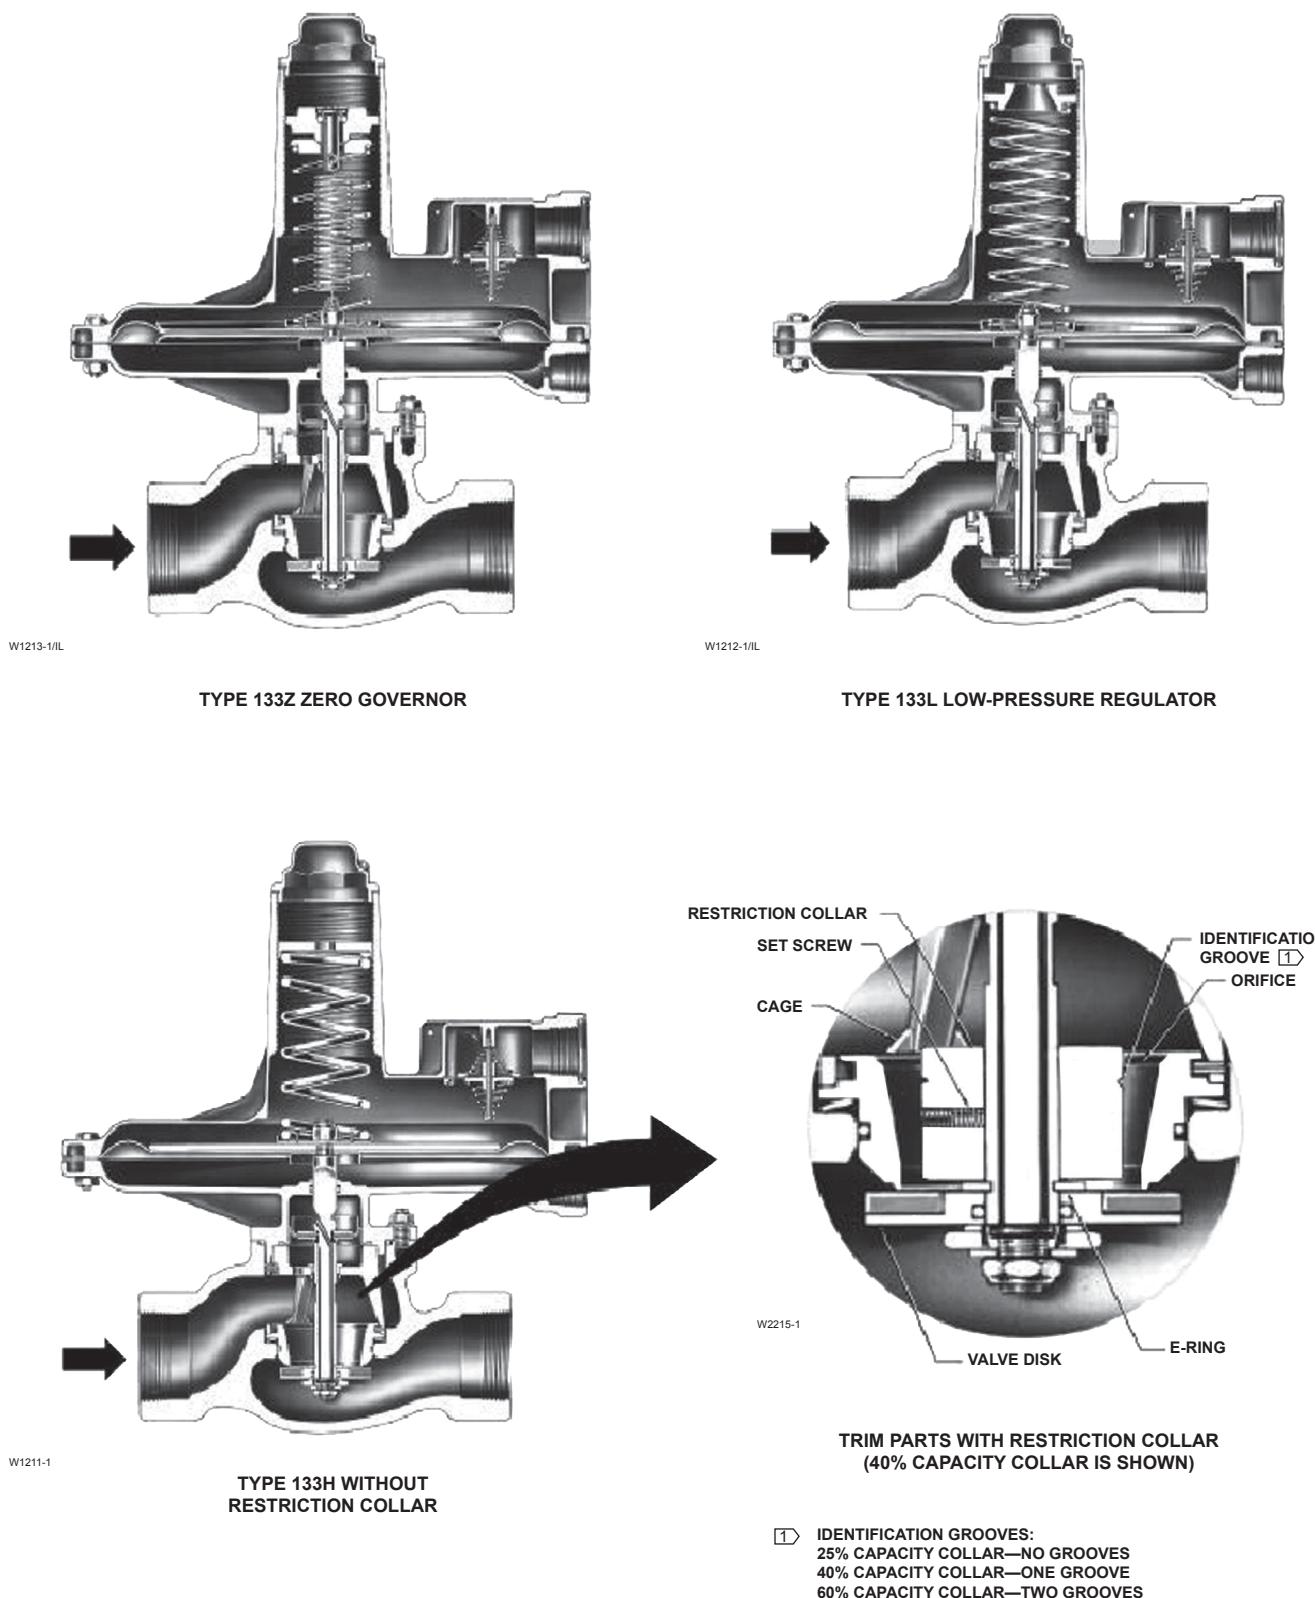

Figure 2. Types 133Z, 133L, and 133H Regulators

Introduction

Description

The 133 Series direct-operated gas regulators, shown in Figure 1 are primarily designed for industrial and commercial applications supplying gas to furnaces, burners, and other appliances. The 133 Series balancing system enables the regulator to provide accurate control of gas pressure for maximum combustion efficiency despite varying inlet pressure conditions. The single port construction provides bubble-tight shutoff. An external downstream control line is required for the operation of the regulator. Refer to Table 1 for outlet pressure ranges of each type. 133 Series regulators are available in a 2 inch / DN 50 body size with either NPT or flanged end connections.

An optional restriction collar (Figure 2) can be installed if wide-open capacity is too high for applications using a relief valve as overpressure protection. The collar reduces wide-open capacity to 25%, 40%, or 60% of standard wide-open capacity.

Principle of Operation

Refer to the operational schematics in Figure 4. In the 133 Series, downstream pressure is registered under the diaphragm via the external control line and is used as the operating medium. Increased demand lowers the downstream pressure and allows the spring to move the diaphragm and stem assembly down, opening the valve disk and supplying more gas to the downstream system. Decreased demand increases the downstream pressure and moves the diaphragm and stem assembly up, closing the valve disk and decreasing the gas supply to the downstream system.

Boosting System

The 133 Series incorporates a balancing diaphragm and a boosting system. When the regulator is locked up, inlet pressure is registered on the top of the valve disk and on the bottom of the balancing diaphragm through registration holes in the top of the cage. Also, downstream pressure is registered on the bottom of the valve disk and on the top of the balancing diaphragm through a passage formed by grooves in the registration disk and an annular space between the stem and stem sleeve.

When the valve disk is open, gas flows from the inlet over the edge of the valve disk to the outlet. Under the valve disk near the registration disk, there is little

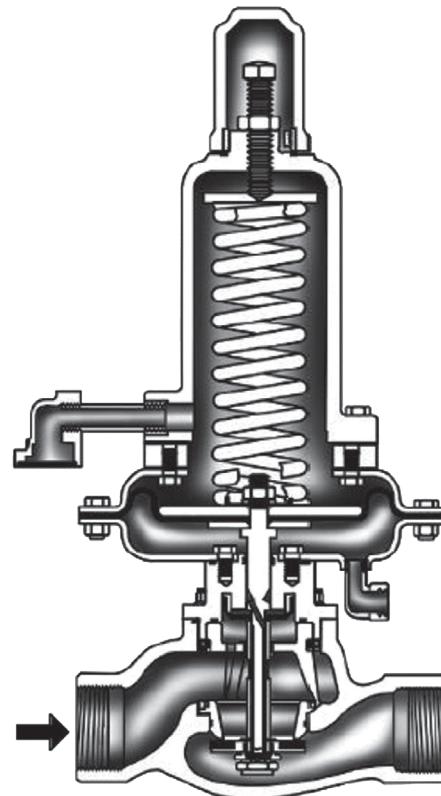

Figure 3. Type 133HP Regulator

gas flow. The gas pressure near the registration disk is higher than it is in the flow path where gas velocity tends to lower the pressure. The higher pressure near the disk is registered on the top of the balancing diaphragm through the registration disk and the annular space between the stem and stem sleeve.

This pressure registered on the top of the balancing diaphragm aids downward disk travel and compensates for spring and diaphragm effect. This improves regulator rangeability and performance.

Two-Way Stabilizer Vent Valve on Types 133H, 133L, and 133Z

When the regulator responds to an increase in downstream pressure, the diaphragm moves upward. As the diaphragm rises, movement of air forces the lower vent stabilizer upward, carrying the upper stabilizer with it (see Figure 5). This allows the air above the diaphragm to vent to atmosphere rapidly enough to minimize lag in diaphragm movement.

As the diaphragm falls, air rushes in the vent to fill the partial vacuum created, forcing the upper vent

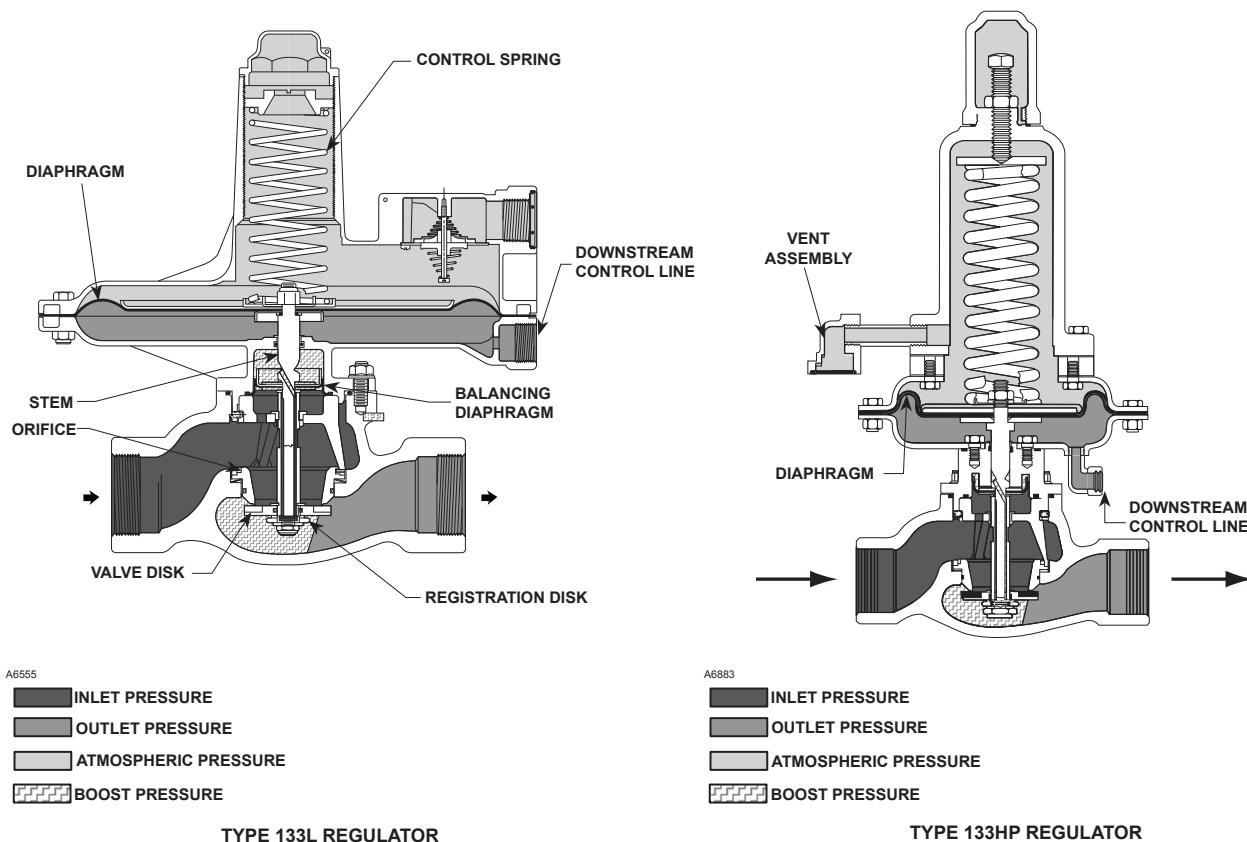

Figure 4. Operational Schematics

stabilizer against the orifice plate. Air flowing through the webs of the upper stabilizer opens the lower stabilizer (see Figure 5). With the regulator at steady-state conditions, both stabilizers are closed and only a small hole is open to help stabilize normal operation.

Installation

The regulator may be installed in any position but is normally installed with the actuator portion vertical above the body portion. Flow through the body must be in the direction indicated by the flow direction arrow cast on the body portion. A downstream control line is required for operation of the regulator.

A remote vent line may be required for some installations. Vent openings must be protected against the entrance of rain, snow, insects, or any other foreign material that may plug the vent.

External dimensions are shown in Figure 9.

Overpressure Protection

As is the case with most regulators, the 133 Series regulators have outlet pressure ratings that are lower than the inlet pressure ratings. Some type of Overpressure Protection is needed if the actual inlet pressure ever exceeds the outlet pressure rating.

Maximum inlet and outlet pressures for the 133 Series are given in Table 2. All models must be protected against inlet pressure above the maximum emergency inlet pressure (refer to Table 2).

Outlet pressure more than 3 psig / 0.21 bar for Types 133H, 133L, and 133Z, or 40 psig / 2.8 bar for Type 133HP over the outlet pressure setting of the regulator may damage internal parts such as the diaphragm plate and valve disk.

Regulator operation below these emergency pressure limitations does not preclude the possibility of damage

Bulletin 71.1:133

			Brown	6.13	156	0.109	2.77			

1. Pressure ranges shown are correct if the regulator is installed with the actuator portion above the body portion. If the regulator is installed with the actuator portion below the body, the pressure ranges will be lowered by approximately 2 inches w.c. / 5 mbar for the Type 133L and by approximately 3 inches w.c. / 7 mbar for the Types 133H and 133Z.
 2. If the 2 inches w.c. / 5 mbar to 2 psig / 0.14 bar springs (all 6 ranges) are used in the Type 133H, the pressure ranges will increase by approximately 1 inch w.c. / 2 mbar due to the weight of the Type 133H parts (assuming that the actuator is installed above the body).

1. With highest spring range available only.

from external sources or from debris in the gas line. The regulator should be inspected for damage after any overpressure condition. Complete instructions for installation, operation, and maintenance are provided with each regulator.

Capacity Data

Flow capacities for various inlet pressures and outlet pressure settings are shown in Tables 3 to 10. Capacities are in thousands of SCFH at 60°F and 14.7 psia and in thousands of Nm³/h at 0°C and 1.01325 bar of 0.6 specific gravity gas. To convert

to equivalent capacities of other gases, multiply the SCFH values shown by the appropriate factor: air—0.775; propane—0.628; butane—0.548; nitrogen—0.789. For gases of other specific gravities, multiply the given capacity by 0.775, and divide by the square root of the appropriate specific gravity. Then, if capacity is desired in Nm³/h at 0°C and 1.01325 bar, multiply SCFH by 0.0268.

Note

For optimum performance, select the lowest spring range that includes the desired outlet pressure setting.

Figure 5. Types 133H, 133L, and 133Z Stabilizer Vent

For restricted-capacity constructions, determine flow capacities for outlet pressure settings of 2 psig / 0.14 bar or less by multiplying the values from Tables 3 to 10 by 25%, 40%, or 60% (depending upon which restriction collar is selected). For pressure settings over 2 psig / 0.14 bar, capacities are given in Table 6. If flow capacities for inlet pressures lower than those shown are required, contact your local Sales Office. The representative regulating C_g of 1650 may be used for regulator sizing of full capacity constructions only if capacity table data is not available. The representative regulating C_g is an approximation only for pressure drops greater than 5 psi / 0.34 bar, because, at a given offset in controlled pressure, the regulating C_g varies with the spring being used with the pressure drop across the valve. To determine capacity using the flow coefficient C_g , use the appropriate procedure below.

Critical Pressure Drops

For critical pressure drops (absolute outlet pressure equal to or less than one-half of absolute inlet pressure), use the following formula:

$$Q = (P_1)(C_g)(1.29)$$

Table 3. Full-Capacity Type 133Z Regulated Flow in Thousands of SCFH of 0.6 Specific Gravity Gas at 14.7 psia and 60°F

INLET PRESSURE		1 inch w.c. / 3 mbar OUTLET PRESSURE SETTING ⁽¹⁾ (EITHER SPRING RANGE)			
		0.5 inch w.c. / 1 mbar Droop		1 inch w.c. / 3 mbar Droop	
psig	bar	SCFH	Nm ³ /h	SCFH	Nm ³ /h
8 inches w.c.	20 mbar	2.4	0.06	5.1	0.14
14 inches w.c.	35 mbar	4.1	0.11	7.4	0.20
1	0.07	6.5	0.17	12	0.32
2	0.14	11.5	0.31	18	0.48
5	0.34	22	0.59	32	0.86
10	0.69	44	1.18	50	1.34
20	1.4	76	2.04	78	2.09

1. Outlet pressure setting was made at approximately 10% of the maximum capacity for the listed conditions.

Non-Critical Pressure Drops

For pressure drops lower than critical (absolute outlet pressure greater than one-half of absolute inlet pressure).

$$Q = \sqrt{\frac{520}{GT}} C_g P_1 \sin \left(\frac{3417}{C_1} \sqrt{\frac{\Delta P}{P_1}} \right) \text{ DEG}$$

where,

- Q = gas flow rate, SCFH
- P_1 = absolute inlet pressure, psia (P_1 gauge + 14.7)
- C_g = regulating or wide-open gas sizing coefficient
- G = specific gravity of the gas
- T = absolute temperature of gas at inlet, °Rankine
- C_1 = flow coefficient
- ΔP = pressure drop across the regulator, psi

Ordering Information

Use the Specifications section on page 2 and carefully review the description to the right of each specification. Use this information to complete the Ordering Guide

on the following page. Specify the desired selection wherever there is a choice to be made. Then send the Ordering Guide to your local Sales Office.

Ordering Guide

Type (Select One)

- 133L
- 133H
- 133Z
- 133HP

Body Material and End Connection Style (Select One)

Cast Iron

- NPT
- CL125 FF

Steel

- NPT
- CL150 RF

Outlet Pressure Range (Select One)

Type 133L or 133H

- 2 to 4 inches w.c. / 5 to 10 mbar, Brown
- 3.5 to 6 inches w.c. / 9 to 15 mbar, Red
- 5 to 9 inches w.c. / 12 to 22 mbar, Black
- 8.5 to 18 inches w.c. / 21 to 45 mbar, White
- 14 to 28 inches w.c. / 35 to 70 mbar, Green
- 0.75 to 2 psig / 52 mbar to 0.14 bar, Blue

Type 133H

- 1.5 to 3 psig / 0.10 to 0.21 bar, Orange
- 2 to 5 psig / 0.14 to 0.34 bar, Yellow
- 5 to 10 psig / 0.34 to 0.69 bar, Blue

Type 133Z

- 1 to 1 inch w.c. / -2 to 2 mbar, Unpainted
- 0 to 4 inch w.c. / 0 to 10 mbar, Brown

Type 133HP

- 2 to 5 psig / 0.14 to 0.34 bar, Yellow
- 4.5 to 10 psig / 0.31 to 0.69 bar, Orange
- 6 to 20 psig / 0.41 to 1.4 bar, Silver
- 16 to 30 psig / 1.1 to 2.1 bar, Red
- 26 to 40 psig / 1.8 to 2.8 bar, Blue
- 36 to 50 psig / 2.5 to 3.4 bar, Green
- 45 to 60 psig / 3.1 to 4.1 bar, White

Trim, Percent of Full Capacity (Select One)

- 100 percent (**standard**)
- 60 percent
- 40 percent
- 25 percent

Elastomers (Select One)

- Nitrile (NBR) (**standard**)
- Fluorocarbon (FKM)
(Available for Types 133L and 133H only)

Body Position (refer to Figure 8) (Select One)

- Position 1 (**standard**)
- Position 2
- Position 3
- Position 4

Vent Position (refer to Figure 8) (Select One)

- Position C (**standard** for Type 133HP)
- Position D
- Position E (**standard** for Types 133L, 133H, and 133Z)
- Position F

Regulators Quick Order Guide	
***	Readily Available for Shipment
**	Allow Additional Time for Shipment
*	Special Order, Constructed from Non-Stocked Parts. Consult your local Sales Office for Availability.

Availability of the product being ordered is determined by the component with the longest shipping time for the requested construction.

Specification Worksheet

Application:

Specific Use _____

Line Size _____

Fluid Type _____

Specific Gravity _____

Temperature _____

Does the Application Require Overpressure Protection?

 Yes No**Pressure:**Maximum Inlet Pressure ($P_{1\max}$) _____Minimum Inlet Pressure ($P_{1\min}$) _____Downstream Pressure Setting(s) (P_2) _____
